$ This file contains the messages used by the registration cgi program. It is divided
$ into three sections. First is the image locations. There are actually snippets of HTML code
$ that get loaded for the images that appear on the registration forms. Second is the
$ HTML segments that are built dynamically. They are contained in this message catalog
$ because they have substitution variables in them. Third are the actual error messages that
$ are inserted into the HTML pages.
$
$set image_locs location of images
